

AB 705 Improvement Plan - Data Addendum Template

Important reminder: To date the review of statewide data, individual college data, and college submissions has failed to produce evidence that pre-transfer-level enrollments meet AB 705 requirements. Colleges planning to allow or require continued pre-transfer-level enrollment that cannot submit evidence that it meets the standards of the law will be expected to place and enroll all U.S. high school graduate, certificate, degree and transfer students in transfer-level coursework (with appropriate concurrent support as needed) by fall 2022.

Which colleges need to complete this data addendum? For colleges that plan to continue placements and/or enrollments into pre-transfer level courses or multi-term transfer-level courses in Fall 2022, the Improvement Plan requires completion of this data reporting template in which colleges will submit local data in an attempt to show completion is maximized for a specific program or student group that enrolls, by requirement or by choice, into pre-transfer level courses or multi-term transfer-level courses.

Which colleges do not need to complete this data addendum? The Improvement Plan does not require the submission of data for colleges that will, by fall 2022, both ensure transfer/college level placement in math/quantitative reasoning and English for all U.S. high school graduate students and permit no pre-transfer/college level enrollments, including multi-term transfer-level courses, for students in certificate, degree or transfer programs.

Data addendum overview: The data addendum is broken into 4 areas: curricular innovations, locally-derived placement models, guided or self-placement processes, and college-level math. Complete the sections that are relevant to each subgroup of students who enroll below transfer-level (voluntarily or after placement.)

What does it mean to maximize throughput? Maximizing throughput means that students enrolling below transfer-level complete a transfer-level course (or college-level course with specific requirements that are not met with transfer-level coursework) within a year at a rate equal to or higher than students with similar high school achievement who begin directly in a transfer-level course. Throughput is calculated within the data addendum by dividing the number of students who start directly at transfer-level and complete the transfer-level course within one full year by the number of students whose first course of enrollment was in a pre-transfer-level course (or college-level) who successfully completed the transfer-level course within one full year.

Reporting throughput for students enrolled in certificate or associate degree programs: If students are enrolled in a certificate or associate degree program “with specific requirements that are not met with transfer-level coursework,” then the college must enter data for students enrolling below college-level and those within the same cohort who successfully complete a college-level course in one year to determine if throughput is maximized for students enrolled below college-level.

Indicating if throughput is maximized: After entering all the requested data, the data addendum will indicate if throughput is maximized for the three GPA bands entered (regardless of sample size). If throughput is not maximized it is indicated as "No", and if throughput is maximized for the student population it is indicated as "Yes". In both instances, colleges completing the data addendum are required to submit the completed data addendum to the CCCCO for review.

How to report enrollments: The data addendum includes tabs to report four separate ways in which students are able to enroll below transfer level in newly developed processes the college has created on or after Fall 2019.

Which enrollments should be reported? If your college changed your processes on or after Fall 2019, and students are still able to enroll below transfer-level, please report on students who enrolled any time between Fall 2019 and Fall 2020, after the change was made to capture the most recent enrollment and outcomes based on the process your college is currently using. Report enrollments for any terms in the timeframe in which students were placed below transfer level and track outcomes for one full year. Because the categories overlap, you may be reporting the same cohort in multiple tabs. All prior processes and curriculum for Fall 2019 were previously reported in the Equitable Placement Validation of Practices Template.

Description of the four categories in the data addendum:

1. *Curricular innovations:* report on enrollment in courses below transfer-level that are not part of the traditional developmental math sequence and are not corequisite support courses associated with transfer-level courses. These courses may include the following: newly developed courses designed to prepare students for transfer-level courses, an accelerated course sequence that starts students in a pre-transfer level course, a transfer-level course stretched over two terms, or a jumpstart or bootcamp course that starts students below transfer level.
2. *Local placement model:* report on enrollment in courses below transfer-level that result from placement rules that deviate from the statewide default placement rules.
3. *Guided or self-placement :* report on enrollment in courses below transfer-level that result from placement processes that are used when high school information is not available.
4. *College-level math :* report on enrollment in **existing** college-level math sections (including intermediate algebra or contextualized versions of intermediate algebra) for students who enroll (voluntarily or as a result of placement) in math courses appropriate to their educational goal and program of study. Enrollments into **newly** developed college-level math courses would be reported by copying Tab 5, Table 1, and following the instructions in Tab 2: Curricular Innovations.

What is the reporting timeframe? Students who receive the curricular innovation, local placement model, guided or self-placement, or enrolled in college-level math at anytime in Fall 2019, Winter 2020, Spring 2020, Summer 2020 and Fall 2020 tracked for one academic year, including intersessions. For example, if a student started in a discipline in the fall, they would be tracked through completion of the gateway course (college-level or transfer-level course appropriate to their educational goal) through the following summer term.

Which students are included in the cohort for curricular innovations and college-level math? Report enrollments for **all** students who received the innovation and whose **first course of enrollment** in English or math/quantitative reasoning was in the intervention and within the timeframe tracked for one year. If a student was enrolled in multiple courses over the timeframe, report only the first or lowest course of enrollment in the discipline. For example, if a student was enrolled in intermediate algebra, precalculus, and calculus in the one-year timeframe, only report enrollment in intermediate algebra as the initial enrollment.

Which students are included in the cohort for local placement model and guided or self-placement? Report students who received the **new placement method** at any time and who enrolled in the discipline for the first time within the timeframe tracked for one year. Report enrollments **regardless** of where the student was placed. For example, if the guided or self-placement model placed students into a transfer-level course, but a student self-placed into a below transfer-level course after engaging with the GSP model, report the students' enrollment in the below transfer-level course.

What if your college has more than one new innovation to report in the same tab? If your college has multiple scenarios to report within a category listed in Tabs 2, 3, 4 or 5, make a copy of the respective tab and complete it for each scenario. For example, if your college had pre-transfer-level enrollments in SLAM (e.g., Pre-Stats or Statway I or other preparation for Statistics-Liberal Arts Math), and an innovative Algebra Preparation for STEM, and a Technical Math course taken by associate degree students, you will need to complete Tab 2 three times, once for each of the three newly developed interventions.

How is the data to be disaggregated within the data addendum? The data addendum requests that you compare students within the same GPA band as defined in the default placement rules which can be found here:
<https://static1.squarespace.com/static/5a565796692ebefb3ec5526e/t/5b6ccfc46d2a73e48620d759/1533857732982/07.18+AB+705+Implementation+Memorandum.pdf.pdf>.

What are the English GPA bands? *Highest:* HSGPA ≥ 2.6 *Middle:* HSGPA 1.9 - 2.6 *Lowest:* HSGPA < 1.9

What are the SLAM GPA bands? *Highest:* HSGPA ≥ 3.0 *Middle:* HSGPA 2.3 - 2.9 *Lowest:* HSGPA ≤ 2.3

What are the B-STEM GPA bands? *Highest:* HSGPA ≥ 3.4 OR HSGPA ≥ 2.6 AND enrolled in a HS Calculus course *Middle:* HSGPA ≥ 2.6 or Enrolled in HS Precalculus *Lowest:* HSGPA ≤ 2.6 and no Precalculus

Where can I find more information about what is to be reported in the data addendum? Additional instructions are included within each tab specific to the requirements of the tab.

Directions: Enter data into the **blue** cells; all other cells are populated automatically. See definitions for each column and the rows below

Course subject area (select and enter only one): English, SLAM or B-STEM:

Educational goal of cohort (select and enter only one): Transfer/Unknown/Undecided, Degree or Certificate:

Course name and short description:

What is the reporting cohort and timeframe? Report on enrollment in courses below transfer-level implemented on or after Fall 2019 through the traditional developmental math sequence and are not corequisite support courses associated with transfer-level courses. These courses include the following: **newly developed** courses designed to prepare students for transfer-level courses, an accelerated course sequence for students in a pre-transfer level course, a transfer-level course stretched over two terms, or a jumpstart or bootcamp course that starts at the transfer level. Report all enrollments for students who enrolled in the **newly developed** curricular innovation at anytime in Fall 2019, Winter Spring 2020, Summer 2020 and Fall 2020 tracked for one academic year. Report only the **first course of enrollment** for the cohort definition or math in which a student was enrolled. If a student was enrolled in multiple courses over the timeframe, report only the first course of the discipline within the curricular innovation being reported. For example, if a student enrolled in a below-transfer-level Pre-Stat and transfer-level Statistics in the timeframe, only report enrollment in Pre-Stat. College-level math (including intermediate algebra or contextualized versus intermediate algebra) enrollments will be reported in this tab only if it is a new innovation. If it is an existing course, report those enrollments separately in Tab 5.

What if your college has more than one new innovation to report? If your college has multiple scenarios to report, make a copy of this tab and complete it for each scenario. For example, if your college had pre-transfer-level enrollments in SLAM (e.g., Pre-Stats or Statway I or other for Statistics-Liberal Arts Math), and an innovative Algebra Preparation for STEM, and a mathematics course for an associate degree or certificate requirements that cannot be met with transfer-level math, you will need to complete Tab 2 three times, once for each intervention.

Columns Explained	
Columns 1 and 4 - Total Enrolled:	These columns show the number of distinct students enrolled at census. If end of term data are used, include (EW, MW, and W grades) as enrollment in the course.
	For an educational goal of transfer, unknown or undecided or for associate degree programs or certificate requirements that <u>can</u> be met with transfer-level math : in Column 1 enter enrollments in innovative below level course sections and in Column 4 enter enrollments in transfer-level sections with or without a corequisite only first disciplinary course enrollments. For example, if a student first enrolls in math below transfer-level student in Column 1 but not Column 4. Include only first disciplinary course enrollments for columns 1 and 4 of where the student was placed. For example, if a student is placed into transfer-level math but enrolls in below transfer-level, include that student in Column 1.
	Transfer-level courses : courses that fulfill general education requirements for English composition or for math/quantitative reasoning upon transfer to a university.
	For math, students with an educational goal of associate degree who are in associate programs with math requirements that <u>cannot</u> be met with transfer-level math/quantitative reasoning , in Column 1 enter enrollments in innovative below-college-level course sections (two or more levels below transfer) and in Column 4 enter enrollments in college-level sections (one level below transfer) with or without a corequisite. Include only first disciplinary enrollments, regardless of where the student placed.
	College-level courses : courses usually coded one-level-below-transfer that meet local degree requirements in which transfer-level coursework does not satisfy programmatic requirements (e.g., an electrical technology course with contextualized math skills). These courses (or higher) should be used for measuring the throughput for such programs.

Columns 2 and 5 - Subtotal who Completed Transfer-Level within One Year:	Columns 2 and 5 show the number of students who successfully completed a transfer-level course in one year or better (including P grades) out of the cohorts defined in Columns 1 and 4 respectively.
Columns 3 and 6 - Throughput Rate:	These columns automatically calculate the percentage of students who successfully completed (C or higher grades) a transfer-level course within one year. To calculate the throughput rate, Column 2 is divided by Column 4, and Column 5 is divided by Column 4, respectively.
Column 7 - Throughput Rate Differences:	The results in Column 7 are automatically calculated by subtracting the number of students in Column 6 from the number in Column 3.
Column 8 - Maximize Throughput?:	This column automatically determines if throughput for students who started below transfer level is equal to or greater than throughput for students who start directly at transfer level. "No" means throughput is NOT maximized. "Yes" means throughput is maximized. Comparisons are calculated regardless of sample sizes in any category. In all instances, colleges completing the template are required to submit the completed data template to the CC review. Refer to Tab 1. Instructions Tab for definition of how throughput is calculated.
English GPA Bands:	Highest: HSGPA ≥ 2.6 Middle: HSGPA 1.9 - 2.6 Lowest: HSGPA < 1.9
SLAM GPA Bands:	Highest: HSGPA ≥ 3.0 Middle: HSGPA 2.3 - 2.9 Lowest: HSGPA ≤ 2.3
B-STEM GPA Bands:	Highest: HSGPA ≥ 3.4 OR HSGPA ≥ 2.6 AND enrolled in a HS Calculus course Middle: HSGPA ≥ 2.6 or Enrolled in HS Precalculus Lowest: HSGPA ≤ 2.6 and no Precalculus

Columns Explained

<p>Columns 1 and 4 - Total Enrolled:</p>	<p>These columns show the number of distinct students enrolled at census. If end of term data are used, include only students who were enrolled at the end of the term.</p> <p>For an educational goal of transfer, unknown or undecided or for associate degree programs with requirements in below-transfer-level course sections after interacting with the GSP model and in Column 4 enter enrollment in disciplinary course enrollments. For example, if a student first enrolls in math below the transfer-level, after that student enrolls in a transfer-level course, include that enrollment in Column 4. Include only first disciplinary course enrollments, regardless of where the student was placed. For a student who enrolls in a course below the transfer-level, include that student in Column 1.</p> <p>Transfer-level courses: courses that fulfill general education requirements for English composition or for mathematics. For English composition, students with an educational goal of transfer, unknown or undecided or for associate degree programs with requirements in Column 1 enter enrollments in below-college-level course sections (two or more levels below transfer) and in Column 4 enter enrollments in college-level sections (one level below transfer) with or without a corequisite. Include only first disciplinary course enrollments.</p> <p>College-level courses: courses usually coded one-level-below-transfer that meet local degree requirements (e.g., an electrical technology program with contextualized math skills). These courses (or higher) are included in the throughput rate. For example, when reporting students with an associate degree or certificate goal in a program, in column 2 report pre-college level enrollments and in column 3 report college-level (or higher) completion for the cohort. In column 4 report college-level (or higher) completion for the cohort.</p>
<p>Columns 2 and 5 - Subtotal who Completed Transfer-Level Course within One Year:</p>	<p>Columns 2 and 5 show the number of students who successfully completed a transfer-level course in one year. Column 2 is the number of students who completed a transfer-level course in one year in Column 1 and 4 respectively.</p>
<p>Columns 3 and 6 - Throughput Rate:</p>	<p>These columns automatically calculate the percentage of students who successfully completed (C or higher) throughput rate, Column 2 is divided by Column 1, and Column 5 by Column 4, respectively.</p>
<p>Column 7 - Throughput Rate Differences:</p>	<p>The results in Column 7 are automatically calculated by subtracting the number of students in Column 6 from Column 5.</p>

Column 8 - Maximize Throughput?:	This column automatically determines if throughput for students who started below transfer level is equal "No" means throughput is NOT maximized, whereas "Yes" means throughput is maximized. Comparisons a colleges completing the template are required to submit the completed data template to the CCCCO for re calculated.
English GPA Bands:	Highest: HSGPA ≥ 2.6 ; Middle: HSGPA 1.9 - 2.6; Lowest: HSGPA < 1.9

ed in HS

Directions: Enter data into the **blue** cells; all other cells are populated automatically. See definitions for each column and the rows tables. If your college does not offer college-level math, do not complete this tab.

Math pathway: B-STEM:

Course name and short description:

Why is this tab included? AB 705 states, "The bill would also authorize the board of governors to establish regulations that ensure students who seek a goal other than transfer, and who are in certificate or degree programs with specific requirements that are not transfer-level coursework, a community college maximizes the probability that a student will enter and complete the required college coursework in [English and] mathematics within a one-year timeframe." The bill further states, "The bill would prohibit a community district or college from requiring students to enroll in remedial [English or] mathematics coursework that lengthens their time to a degree unless placement research that includes consideration of high school grade point average and coursework shows that those highly unlikely to succeed in transfer-level coursework in [English and] mathematics." This tab provides colleges an opportunity to report enrollments into a college-level course (or below) and the successful completion of the gateway course (college-level or transfer level) appropriate to a student's educational goal.

What course enrollments are reported in this tab? Report all existing college-level math course enrollment for students with a transfer goal (including unknown and undecided) or students with a degree or certificate goal enrolled in programs with specific requirements that include transfer-level coursework. Newly created college-level math courses (including intermediate algebra or contextualized versions of intermediate algebra) should be reported in Tab 2: Curricular Innovations.

What is the reporting timeframe: Report all enrollments for students enrolled in existing sections of college-level math (including intermediate algebra or contextualized versions of intermediate algebra) at anytime in Fall 2019, Winter 2020, Spring 2020, Summer 2020 and Fall 2020 tracked for one academic year. If a student was enrolled in multiple courses over the timeframe, report only the first course of enrollment.

How to report students with an associate degree or certificate goal in programs where math requirements that cannot be met via transfer-level math/quantitative reasoning: Report students with a degree or certificate goal in programs where math requirements cannot be met via transfer-level math/quantitative reasoning in Table 1 who are enrolled (voluntarily or as a result of placement) in a college-level math course in the BSTEM pathway. Disaggregate students by GPA band using the B-STEM rules.

How to report students with a transfer, unknown, undecided goal: Report students with a transfer (or unknown or undecided) goal who are enrolled (voluntarily or as a result of placement) in a college-level math course in the BSTEM pathway. Disaggregate students by GPA band using the B-STEM rules.

What if your college needs to report additional intermediate algebra or versions of intermediate algebra enrollments for student pathway? If students on the SLAM pathway are allowed to enroll in college-level math (including intermediate algebra or context of intermediate algebra) duplicate Tab 5 and report the SLAM GPA bands and courses associated with that pathway.

Table 1. Students with a Degree or Certificate Goal in Programs with Math Requirements Not Satisfied by Transfer-level C

B-STEM GPA Bands:

*Highest: HSGPA ≥ 3.4 OR HSGPA ≥ 2.6 AND enrolled in a HS Calculus course

**Middle: HSGPA ≥ 2.6 or Enrolled in HS Precalculus

***Lowest: HSGPA ≤ 2.6 and no Precalculus

Columns Explained		
	Table 1. Students with a Degree or Certificate Goal in Programs with Math Requirements <u>Not</u> Satisfied by Transfer-level Math/Quantitative Reasoning	Table
Columns 1 and 4 - Total Enrolled	<p>These columns show the number of distinct students enrolled at census. If end of term data are used, include withdraws (EW, MW, and W grades) as enrollment in the course.</p> <p>For students with an educational goal of associate degree or certificate who are enrolled in programs with math requirements that cannot be met with transfer-level math/quantitative reasoning, in Column 1 enter enrollments in college-level sections (or lower) and in Column 4 enter enrollments in transfer-level math with or without a corequisite. Include only first math course enrollments, regardless of where the student placed. For example, if a student is placed into transfer-level math but enrolls in intermediate algebra or contextualized versions of intermediate algebra, include that student in Column 1.</p>	<p>These columns sl used, include wit</p> <p>For students with enrollments in cc level sections wit example, if a stu include the stude regardless of whi math but enrolls include that stud</p>

	College-level courses: courses usually coded one-level-below-transfer that meet local degree requirements for programs in which transfer-level coursework does not satisfy programmatic requirements (e.g., an electrical technology program with contextualized math skills).	Transfer-level co reasoning upon t
Columns 2 and 5 - Subtotal who Completed College-Level/Transfer-Level within One Year:	Columns 2 and 5 show the number of students who successfully completed a college-level course or higher in one year with a C or better (including P grades) out of the cohorts defined in Columns 1 and 4, respectively.	Columns 2 and 5 course in one year and 4, respective
Columns 3 and 6 - Throughput Rate:	These columns show the percentage of students who successfully completed (C or higher, including P grades) college-level math or higher within one year. To calculate the throughput rate, Column 2 is divided by Column 1 and Column 5 by Column 4 (respectively).	These columns sl including P grade Column 2 is divid
Column 7 - Throughput Rate Differences	The results in Column 7 are automatically calculated by subtracting the number of students in Column 6	
Column 8 - Maximize Throughput?	This column automatically determines if throughput for students who started below transfer level is equal. "No" means throughput is NOT maximized, whereas "Yes" means throughput is maximized. Comparison colleges completing the template are required to submit the completed data template to the CCCCO for calculated.	
SLAM GPA Bands:	Highest: HSGPA ≥ 3.0 ; Middle: HSGPA 2.3 - 2.9; Lowest: HSGPA ≤ 2.3

2. Students with a Transfer Goal including Unknown and Undecided

How the number of distinct students enrolled at census. If end of term data are available, include students who withdrew (EW, MW, and W grades) as enrollment in the course.

For an **educational goal of transfer, unknown or undecided**, in Column 1 enter enrollments in college-level sections (or lower) and in Column 4 enter enrollments in transfer-level sections with or without a corequisite. Include only first disciplinary course enrollments. For students who first enroll in intermediate algebra or versions of intermediate algebra, report enrollment in Column 1 but not Column 4. Include only the first math enrollment where the student was placed. For example, if a student is placed into transfer-level intermediate algebra or contextualized versions of intermediate algebra, report enrollment in Column 1.

courses: courses that fulfill general education requirements for math/quantitative transfer to a university.

show the number of students who successfully completed a transfer-level course with a C or better (including P grades) out of the cohorts defined in Columns 1 and 2.

show the percentage of students who successfully completed (C or higher, including P grades) a transfer-level course within one year. To calculate the throughput rate, divide the number in Column 3 by the number in Column 1, and Column 5 by Column 4, respectively.

is from the number in Column 3.

equal to or greater than throughput for students who start directly at transfer level. These rates are calculated regardless of sample sizes in any category. In both instances, refer to Tab 1. Instructions Tab for definition of how throughput is calculated.
